

*Lean agile governance:  
finding a new hope*

**Novavi**  
*focused renewal*

*“Mere good governance is not enough; it has to be pro-people and pro-active. Good governance is putting people at the center of development process.”*

---- Narendra Modi ----

# BUREAUCRACY

Nothing can stop it.

*“The seven rules of  
bureaucracy”*

Loyd S. Pettegrew and Carol A. Vance,  
See

<https://mises.org/library/seven-rules-bureaucracy>

*Bureaucracy is the epoxy  
that greases the wheels  
of progress.*

James H. Boren, in *When in Doubt, Mumble : A  
Bureaucrat's Handbook* (1972)

*Success factors*

## 2 Approaches to governance

### *Consultative*

“Spirit of the law” and Outcomes focussed  
Institutional frame-setting focusing and  
driven from governance principles

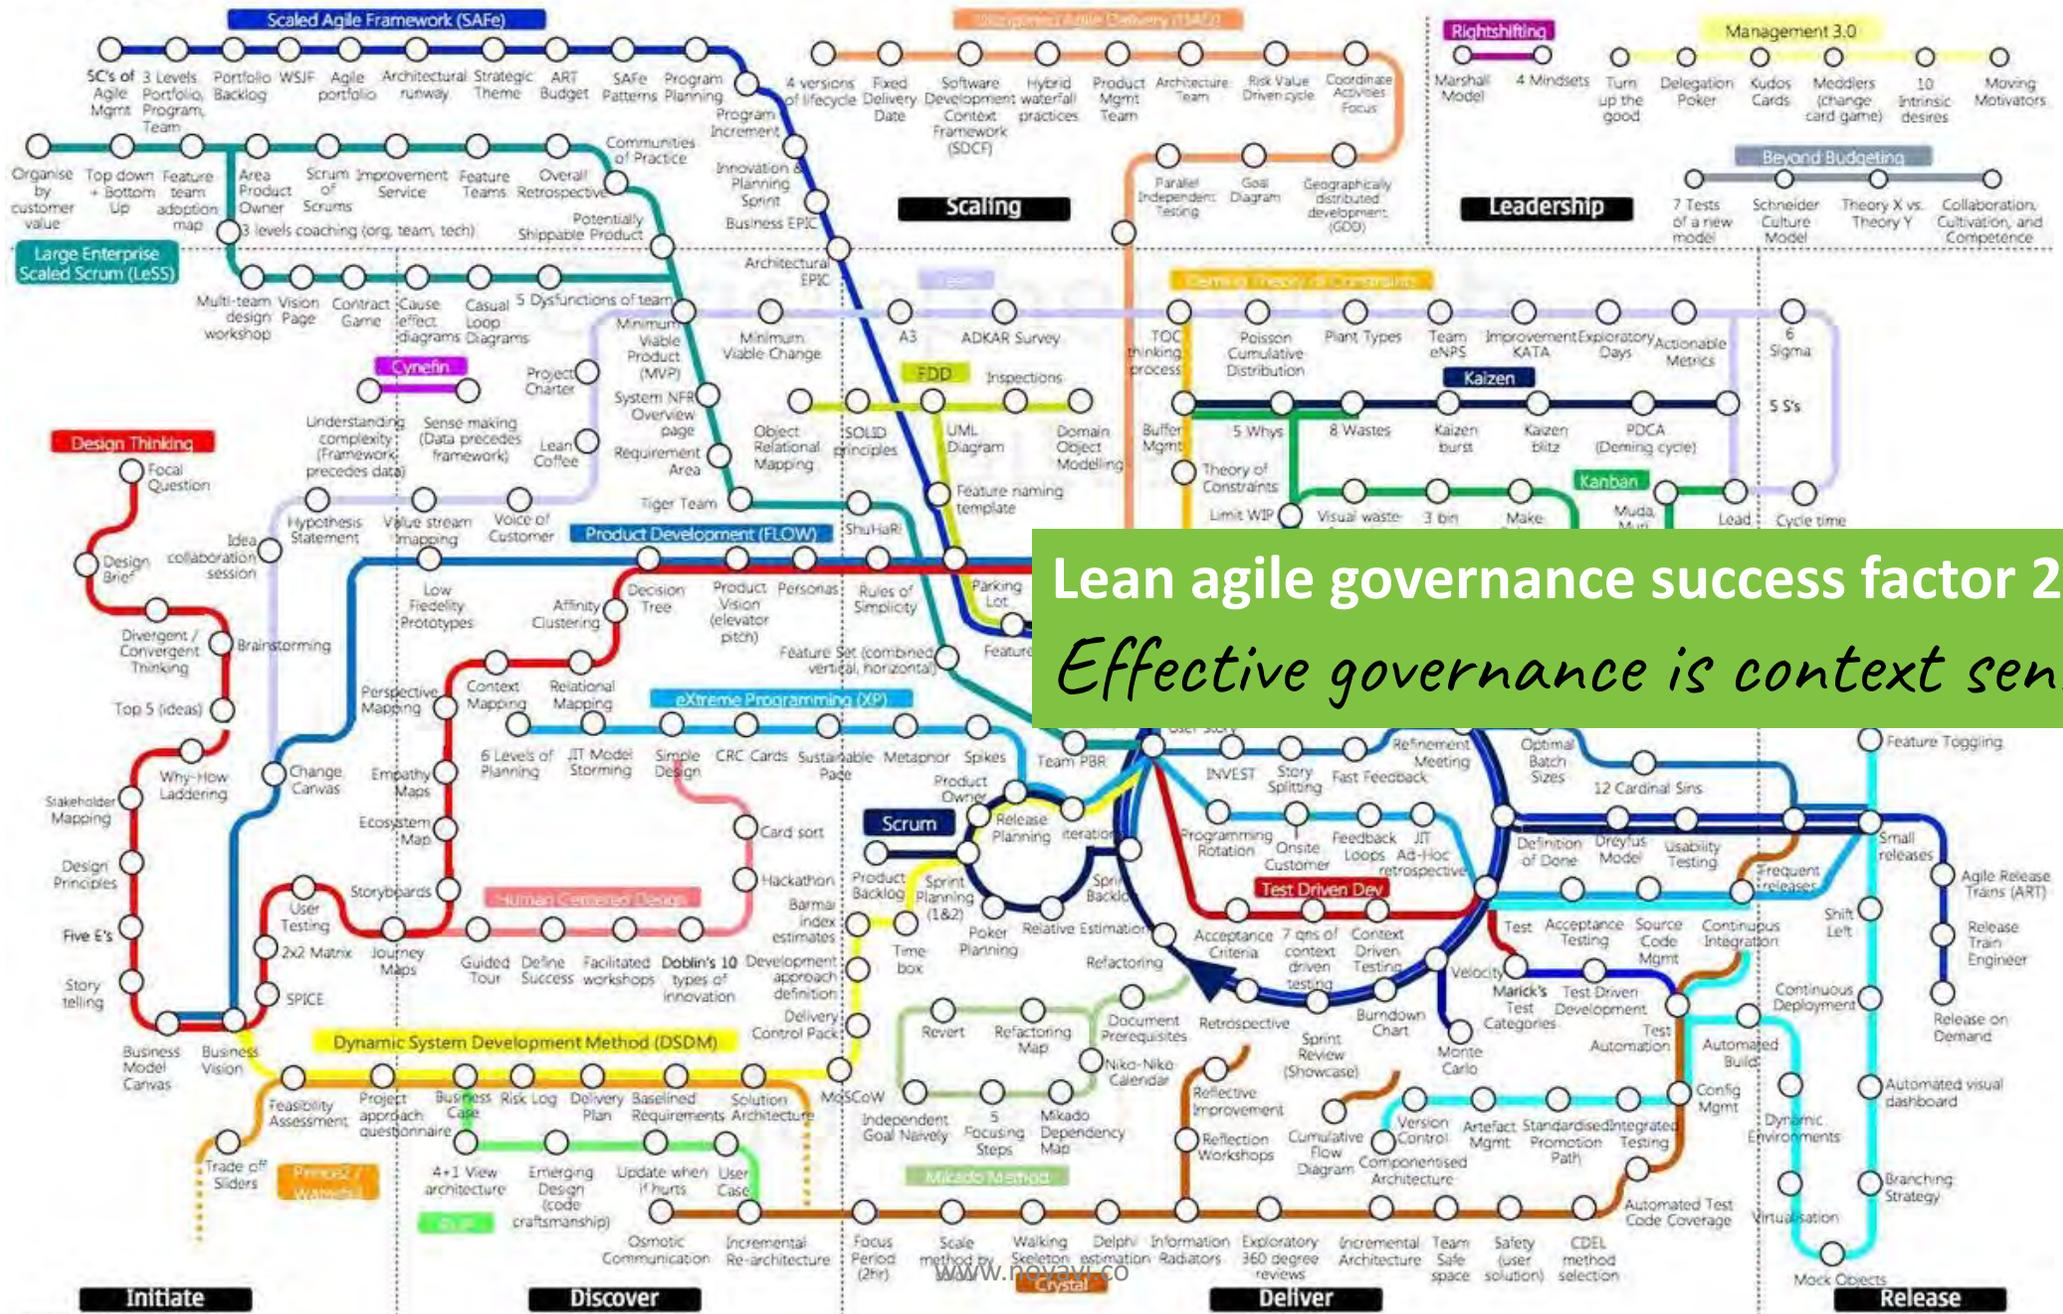

### *Directive*

“Letter of the law” and Outputs focussed.  
Traditional “Quality Assurance” guidelines through  
procedural aspects (excessive form = Bureaucracy)

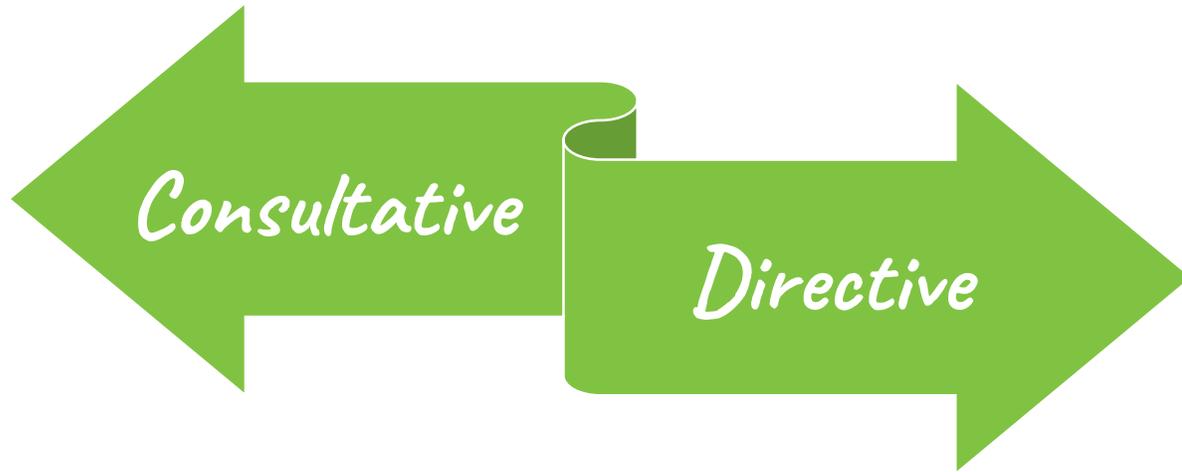

**Lean agile governance success factor 1:**

*There will always be governance required – It is happening*

# The "Agile Industrial Complex"

Lean agile governance success factor 2:  
*Effective governance is context sensitive*

*Which one?*

Both make sense, but what is the right balance? Consider:

- Does governance exist to feed the bureaucracy?
- Does governance exist to enable better customer outcomes?
- Does your governance make things better for your teams?
- What are the goals and actual outcomes of your governance?

**Lean agile governance success factor 3:**

*Goal and principle driven governance is more effective*

# Comparing Agile and Traditional Approaches to Governing of Agile Teams (Scale: -10 to +10)

## Research

*The wrong type of governance can actively help to reduce quality!*

*Gartner's IT governance maturity model*

# Governance Maturity Model: Delivers Greater Business Benefits at Each Level

| Maturity Level                         | Decision-Making Style  | Business Outcomes  | Strategic Planning Approach  | Leadership Style   | Risk Approach   | Fiscal Approach   |
|--|--|--|--|--|---|---|
| <b>Level 1: None</b>                   | Decision making is random rather than deliberate and coordinated                                       | Enterprise is slow to react to competitive threats, weak resource management and poor transparency | Minimal to no strategic planning taking place  | Follows practice or doctrine of noninterference with individuals or business units     | Ignore/deny risks   | Distribution of budget to individuals and groups with weak central controls           |
| <b>Level 2: Isolated Competency</b>    | Decision making is deliberate for high-risk efforts or crises only                                     | Performance improves in distinct pockets of the enterprise only                                    | Near-term focused and limited in scope to key initiatives                                    | Focused on high-priority or high-stress activities and delegates other activities      | Respond reactively to imminent risks only                           | Funds allocated parochially to a community or set of initiatives                      |
| <b>Level 3: Risk Mitigation</b>        | Decisions driven by constrained resources or compliance issues   | Reduced costs, and reduced waste of resources. Greater regulatory compliance                       | Longer-term focused, but created in response to specific events or immediate conditions      | Control-oriented and deliberate, averse to delegating to others                        | Proactively identify and manage cost, compliance and security risks | Cost accounting and cost recovery focus with little variability or agility in budgets |
| <b>Level 4: Benefit Optimization</b>   | Decisions are driven from the top down; based on a clearly articulated strategy and guiding principles | Predictable ROI and growth, and measurable operational improvements                                | Long-term focused, based on taking advantage of enterprise synergies and coordinated efforts | Devolved style with clear prioritization and guidance moving through enterprise layers | Accept and manage business risks based on an ROI model              | IT portfolio managed at the run/grow/transform level                                  |
| <b>Level 5: Competitive Innovation</b> | Decisions are made dynamically and at high speed   | Ability to innovate and deliver competitive advantages in spite of competition or environment      | Strategy iterates rapidly in response to competitive opportunities and threats               | Heavy focus on experimentation and problem-solving activities                          | Take calculated risks for competitive advantage                     | Venture capitalist approach to financial management                                   |

<https://dancaringi.wordpress.com/2012/12/04/corporate-governance-maturity-model/>

*Does this not describe lean and agile?*

Improve Performance

Have a defined vision for the future of the company

Take a big picture view of the business separate from the operations

Ensure there is accountability and oversight of operations

Manage Risk

Find the right balance between making short-term gains and building long-term wealth

Helps with the establishment of a coherent culture of fit-for-purpose quality throughout the organisation

Supports effective decision making

*What are the outcomes of effective governance?*

Lean agile governance success factor 4:

*Everyone deserves effective governance, not mindless bureaucracy*

<https://www.iod.org.nz/FirstBoards/What-is-governance>  
and <https://www.itproportal.com/features/how-to-create-a-culture-of-good-governance-through-qa/>

# *Beware the cookie-cutter approach*

**Lean agile governance success factor 5:**

*Effective governance supports multiple  
and blended approaches*

“Overregulation is not good governance. Good governance stems from a culture of appropriate core values within the institution. What constitutes good practices in governance **will vary according to the goals and objectives of a particular institution**”

(Australian National University, 2007)

# *Implications of an “agile mindset” in governance*

- Lead by Example
- Be a “Host” and Servant Leader
- Motivation over management
- Enablement over audit
- Communicate clearly, honestly and in a timely manner
- Streamline Collaboration
- Trust but Verify
- Focus on Risk mitigation, not reviewing documents
- Learn continuously
- Consider both long and short term

**Lean agile governance success factor 6:**

*Effective governance thrives on a lean agile mindset*

# Governance in an era of complexity (Complex Adaptive Systems)

## Consider:

- What organisational layers are we governing?
- What is the scope of the governance required across each layer?
- Do we focus on optimizing the whole and not just the parts?

**Lean agile governance success factor 7:**

*Effective governance is enterprise aware*

# *Delegated authority is becoming the norm*

Lean agile governance success factor 8:

*Agile teams are most effective  
when governed in a lean agile manner*

“In business today, effective processes for decision making are associated with words like speed, agility, and ambidexterity-- characterized by **fewer filters through which decisions have to be processed and fewer people who have veto power over ideas**, good or bad. **Authority is delegated along with responsibility.** Everyone acts in the best interests of the organization, assuming knowledge of the objectives and acceptable ways of achieving them. Permission doesn't have to be granted. Rather, people act now and inform later, or else explain and examine what they did after the fact if things didn't go well.”

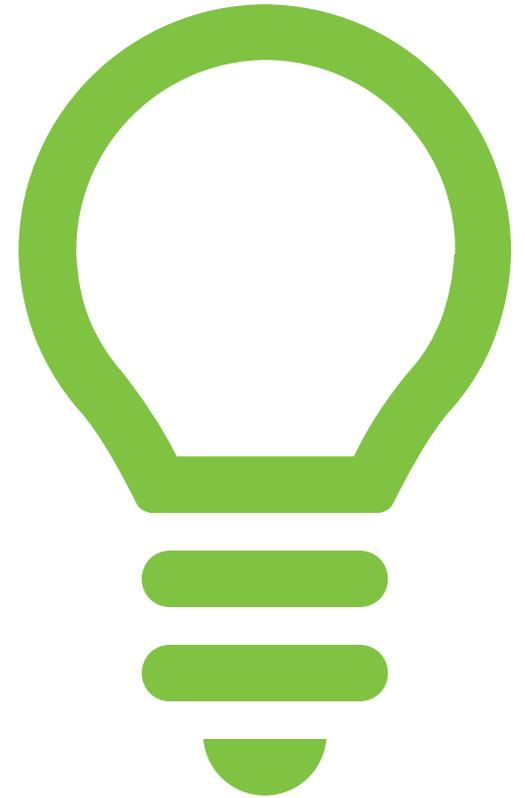

James Heskett, Harvard Business School, See <https://hbswk.hbs.edu/item/how-much-bureaucracy-is-a-good-thing-in-government-and-business>

# Recap: lean agile governance success factors

1. There will always be governance required – It is happening
2. Effective governance is context sensitive
3. Goal and principle driven governance is more effective
4. Everyone deserves effective governance, not mindless bureaucracy
5. Effective governance supports multiple and blended approaches
6. Effective governance thrives on a lean agile mindset
7. Effective governance is enterprise aware
8. Agile teams are most effective when governed in a lean agile manner

# *Lean agile governance ideas*

.... Just a few of many....

## *Disciplined Agile Principles*

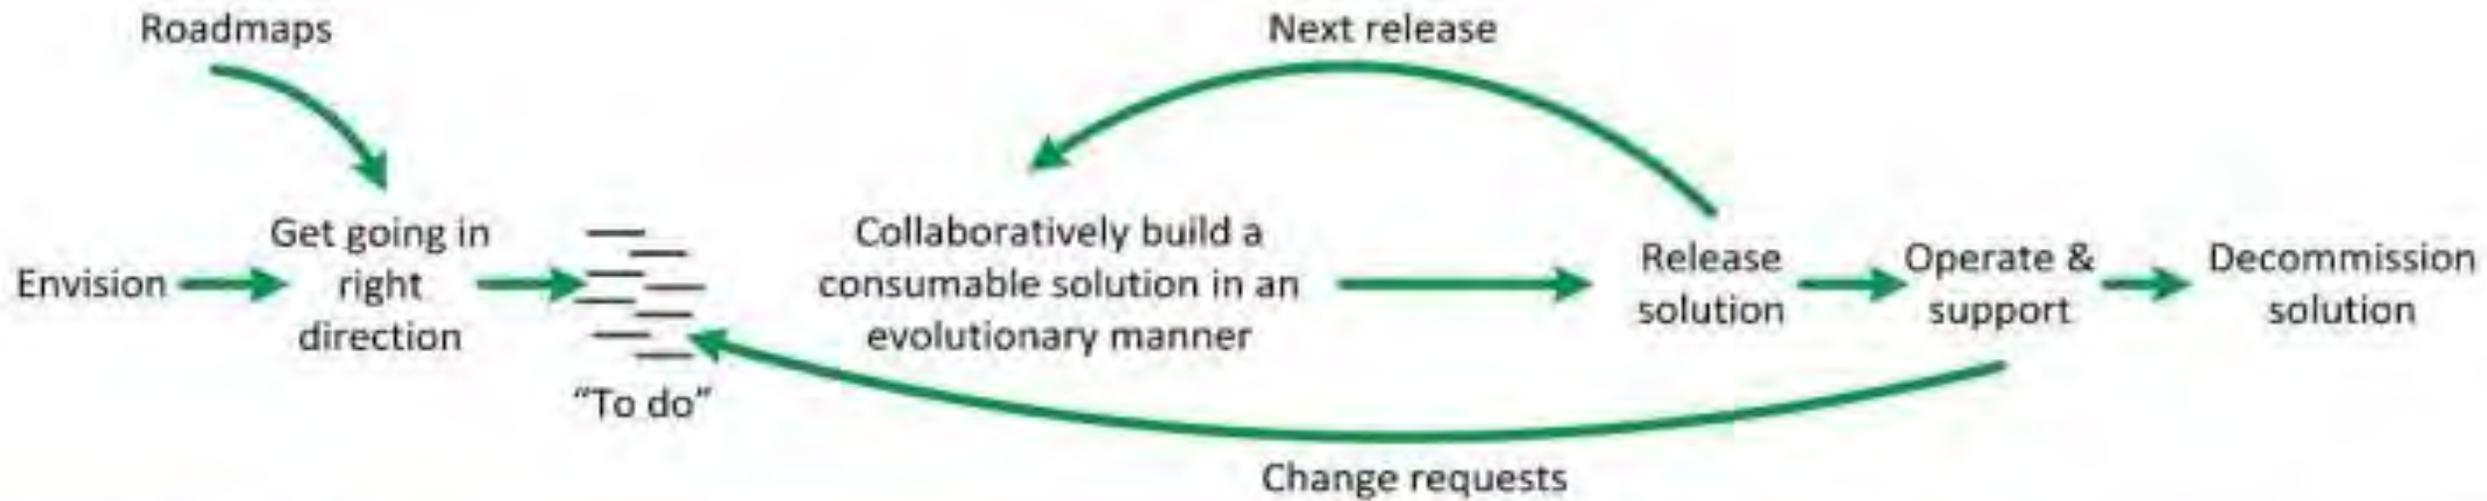

## *Agile principles*

*6. Effective governance thrives on a lean agile mindset*

*8. Agile teams are most effective when governed in a lean agile manner*

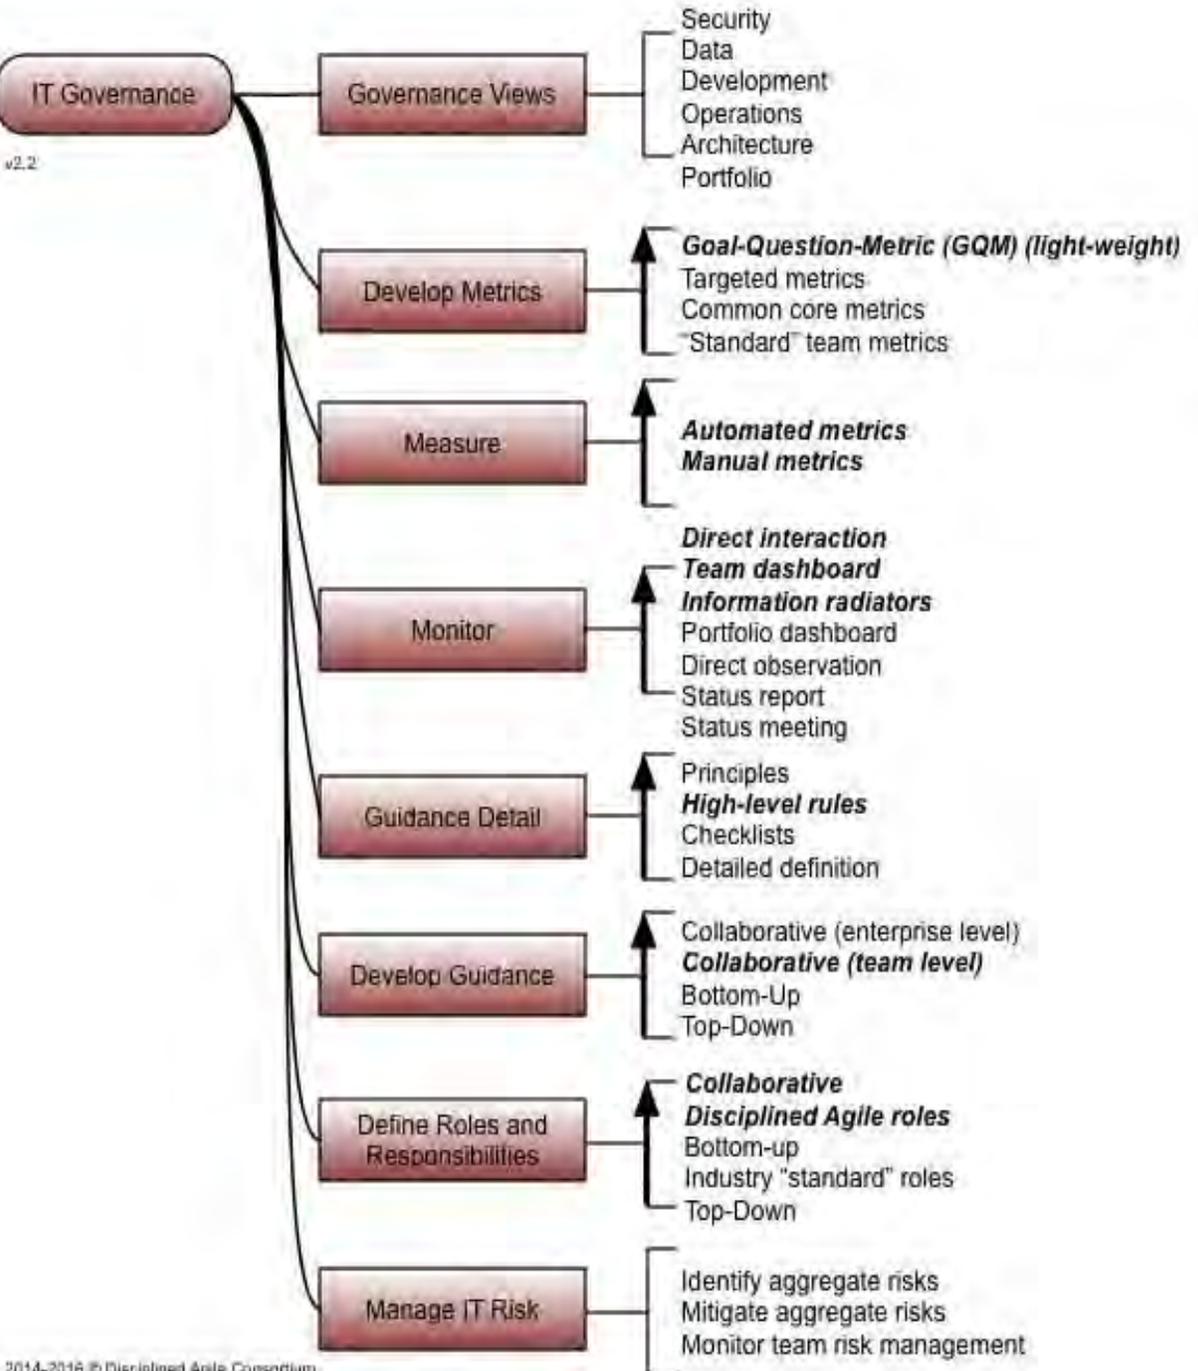

# Delivery lifecycle & lean agile governance

3. Goal and principle driven governance is more effective

v2.2

# IT governance

2. Effective governance is context sensitive

5. Effective governance supports multiple and blended approaches

7. Effective governance is enterprise aware

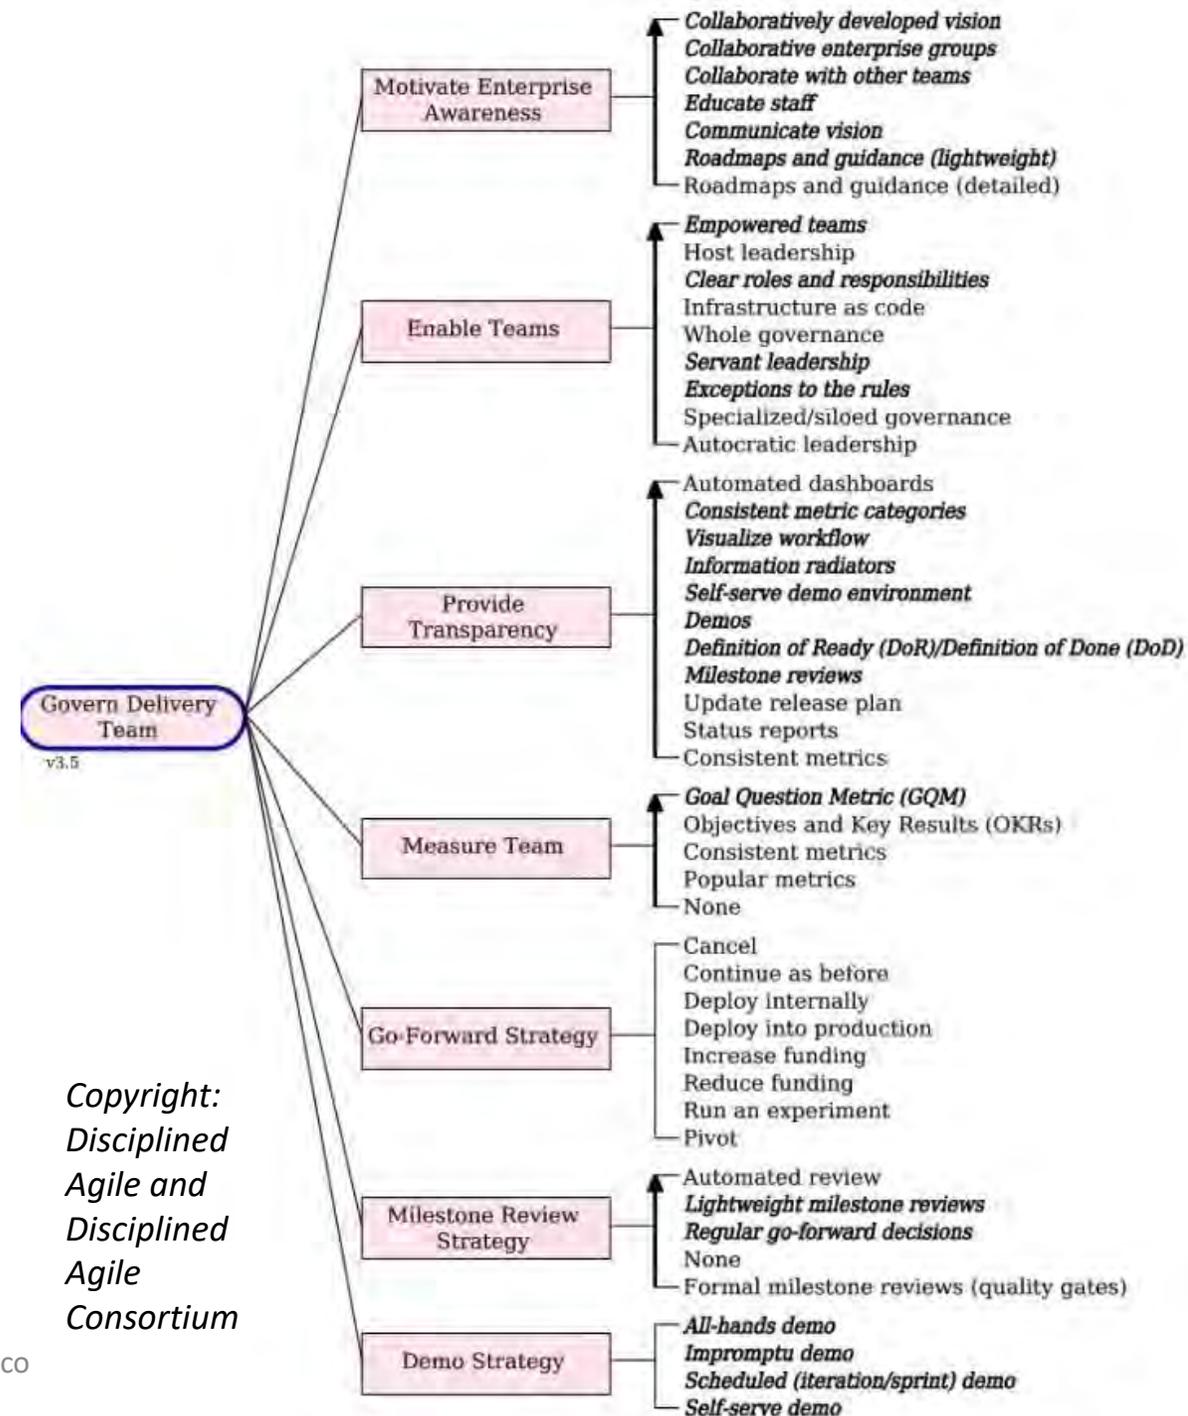

# Delivery team governance

4. Everyone deserves effective governance, not mindless bureaucracy

2. Effective governance is context sensitive

5. Effective governance supports multiple and blended approaches

8. Agile teams are most effective when governed in a lean agile manner

Copyright:  
Disciplined  
Agile and  
Disciplined  
Agile  
Consortium

*8. Agile teams are most effective when governed in a lean agile manner*

# Final thoughts

*Additional ideas for effective lean agile governance*

*Everyone is directly accountable to customers  
(Haier's "zero-distance" principle)*

*Include governance and quality considerations in service design*

*Refine the governance iteratively (as in a lean agile manner – start lightweight and improve incrementally)*

## Lean agile governance values:

Collaboration over conformance

Enabling teams to succeed over inspection of their work artefacts

Continuous monitoring over quality gates

Transparency over management reporting

*Thank you!*
